# d&b Remote network workshop

Tony Lloyd

has broadened his knowledge. He has participated in the d&b Remote network workshop that has practically introduced him to the complete functionality and control surfaces of d&b amplifiers, and instructed him as to which devices and cables are required to create a network. In addition not only can he now design application specific user interfaces using the d&b R1 Remote control software, but has been informed about the integration of a network into a system specified to meet the requirements of "Sound systems for emergency purposes".
